Angular type air gripper

MHC2/MHCA2/MHCM2 Series

MHC2-6□

Auto switch is attachable.

48 mm x 20 mm x 10 mm 22 g

MHCA2-6□

Short body.

41 mm x 20 mm x 10 mm 19 g

MHCM2-7S

Smallest size and lightest weight in MHC series.

23 mm x 15 mm x 10 mm 9.5 g

Body option (Only for MHCA2-6)

Variations

Model	MHC2-6□	MHCA2-6□	MHCM2-7S
Cylinder bore	ø6	ø6	ø7
Action	Double acting Single acting (Normally open)		Single acting (Normally open)
Opening/Closing angle (Both sides)	30° to -10°		20° to -7°
Holding moment (at 0.5 MPa)	0.038 N-m (Double acting) 0.024 N-m (Single acting)		0.017 N-m
Repeat ability	±0.02 mm		
Maximum operating frequency	180 c. p.m		
Weight	22 g (Note)	19 g	9.5 g
Auto switch	Solid state auto switch (2-wire, 3-wire)	—	—
Body option	—	End boss type	—

Note) Not including auto switch weight.

MHC2/MHCA2/MHCM2 Series Specific Product Precautions

Be sure to read this before handling the products.

Mounting

Warning

1. Tighten the screw within the specified torque range when mounting the air gripper.
Tightening with a torque above the limit can cause malfunction, while insufficient tightening can cause slippage and dropping.

How to Mount Air Grippers

Axial Mounting (Body tapped)

Model	Bolt	Max. tightening torque N·m	Max. screw-in depth L mm
MHCA2-6	M2 x 0.4	0.15	6
MHCM2-7S	M2 x 0.4	0.15	4

Note) MHC2-6 is not compatible with axial mounting.

Model	Hole dia. mm	Hole depth mm
MHCA2-6	$\phi 7H8^{+0.022}_0$	1.5

Vertical mounting (Body tapped)

Model	Bolt	Max. tightening torque N·m	Max. screw-in depth L mm
MHCA2-6	M2 x 0.4	0.15	4

Note) MHC2-6 and MHCM2-7S are not compatible with vertical mounting.

Lateral mounting (Body tapped, body through-hole)

● Body tapped

Model	Bolt	Max. tightening torque N·m	Max. screw-in depth L mm
MHC2-6	M3 x 0.5	0.88	10
MHCA2-6	M3 x 0.5	0.88	10
MHCM2-7S	M2 x 0.4	0.15	10

● Body through-hole

Model	Bolt	Max. tightening torque N·m
MHC2-6	M2.5 x 0.45	0.49
MHCA2-6	M2.5 x 0.45	0.49

Note) MHCM2-7S is not compatible with body through-hole mounting.

Warning

2. Do not scratch or dent the air gripper by dropping or bumping it when mounting.
Slight deformation can cause inaccuracy or a malfunction.
3. Tighten the screw within the specified torque range when mounting the attachment.
Tightening with a torque above the limit can cause malfunction, while insufficient tightening can cause slippage and dropping.

How to Mount Attachment to the Finger

Make sure to mount the attachments on fingers with the tightening torque in the table below by using bolts, etc., for the female threads on fingers.

Attachment

Model	Bolt	Max. tightening torque N·m
MHC□2-6	M2 x 0.4	0.15
MHCM2-7S	M2 x 0.4	0.15

Operating Environment

Caution

Use caution for the anti-corrosiveness of finger guide section.

Except for some models, martensitic stainless steel is used for the finger. However, be aware that its anti-corrosion performance is inferior to austenitic stainless steel. In particular, the finger might be rusted in an environment where water droplets are adhered to it due to dew condensation.

MHC2/MHCA2/MHCM2 Series

Model Selection

Model Selection

Selection Procedure

Step 1 Confirm gripping force

Step 2 Confirmation of inertial moment of attachment

Step 1 Confirmation of Gripping Force

Confirmation of conditions

Calculation of required gripping force

Model selection from gripping force graph

Example Workpiece mass: **0.01 kg**

Gripping method: External gripping

Model selection criteria with respect to workpiece mass

- Although differences will exist depending on factors such as shape and the coefficient of friction between the attachments and workpieces, select a model which will provide a gripping force 10 to 20 times the ^(Note 1) weight of the workpiece.
- (Note 1) Refer to the model selection illustration for more information.
- Furthermore, in cases with high acceleration or impact, etc., it is necessary to allow an even greater margin of safety.

Example: When it is desired to set the gripping force at 10 times or more the workpiece weight.
 Required gripping force = $0.01 \text{ kg} \times 10 \times 9.8 \text{ m/s}^2$
 = Approx. 0.98 N or more

Length of gripping point: **25mm**

Operating pressure: **0.4MPa**

MHC2-6D/MHCA2-6D

- Selecting the **MHC2-6D**. The gripping force of 1.25 N is obtained from the intersection point of gripping point distance $L = 25 \text{ mm}$ and pressure of 0.4 MPa.
- The gripping force is 12.7 times greater than the workpiece weight, and therefore satisfies a gripping force setting value of 10 times or more.

Model Selection Illustration

When gripping a workpiece as in the figure to the left and with the following definitions,
F: Gripping force (N)
 μ : Coefficient of friction between attachments and workpiece
m: Workpiece mass (kg)
g: Gravitational acceleration (= 9.8 m/s^2)
mg: Workpiece weight (N)

the conditions under which the workpiece will not drop are

$$2 \times \mu F > mg$$

↑
Number of fingers

and therefore,

$$F > \frac{mg}{2 \times \mu}$$

With "a" as the safety margin, F is determined as follows:

$$F = \frac{mg}{2 \times \mu} \times a$$

Gripping force at least 10 to 20 times the workpiece weight

The "10 to 20 times or more of the workpiece weight" recommended by SMC is calculated with the safety margin of $a = 4$, which allows for impacts that occur during normal transportation, etc.

When $\mu = 0.2$	When $\mu = 0.1$
$F = \frac{mg}{2 \times 0.2} \times 4$	$F = \frac{mg}{2 \times 0.1} \times 4$
$= 10 \times mg$	$= 20 \times mg$

10 x workpiece weight

20 x workpiece weight

(Note) - Even in cases where the coefficient of friction is greater than $\mu = 0.2$, for safety reasons, SMC recommends selecting a gripping force which is at least 10 to 20 times the workpiece weight.
 - It is necessary to allow a greater safety margin for high accelerations and strong impacts, etc.

Step 1 Effective Gripping Force: MHC□2 Series External Gripping Force

- Expressing the effective gripping force
The effective gripping force shown in the graphs to the right is expressed as F, which is the thrust of one finger when both fingers and attachments are in full contact with the workpiece as shown in the figure below.

External Gripping

- If there is an overhang, please consult with SMC.

Step 2 Confirmation of Inertial Moment of Attachment

Confirm the inertial moment of one of the two attachments.
For example, in calculating the inertial moment of an attachment in the picture on the left, divide it into 2 rectangular parallelepipeds, A part and B part.

Procedure	Formula	Example						
<p>1. Calculate the operating conditions and attachment dimensions.</p>	<p>A part</p> <p>B part</p>	<p>Operating equipment: MHC2-6D a = 20 (mm) b = 3 (mm) c = 4 (mm) d = 4 (mm) e = 5 (mm) f = 6 (mm)</p>						
<p>2. Calculate the inertial moment of the attachment.</p>	<p>A part</p> <p>Weight calculation $m_1 = a \times b \times c \times \text{Relative density}$</p> <p>Inertial moment around Z1 axis $I_{z1} = \{m_1 (a^2 + b^2) / 12\} \times 10^{-6}$</p> <p>Inertial moment around Z axis $I_A = I_{z1} + m_1 f_1^2 \times 10^{-6}$</p> <p>B part</p> <p>Weight calculation $m_2 = d \times e \times f \times \text{Relative density}$</p> <p>Inertial moment around Z2 axis $I_{z2} = \{m_2 (d^2 + e^2) / 12\} \times 10^{-6}$</p> <p>Inertial moment around Z axis $I_B = I_{z2} + m_2 f_2^2 \times 10^{-6}$</p> <p>Thus, the total inertial moment is $I = I_A + I_B$ (*: Unit conversion constant)</p>	<p>Assuming the attachment material is aluminium alloy (relative density=2.7), $r_1 = 16.4$ (mm).</p> <p>$m_1 = 20 \times 3 \times 4 \times 2.7 \times 10^{-6}$ $= 6.48 \times 10^{-4}$ (kg)</p> <p>$I_{z1} = \{6.48 \times 10^{-4} \times (20^2 + 3^2) / 12\} \times 10^{-6}$ $= 2.21 \times 10^{-8}$ (kg·m²)</p> <p>$I_A = 2.21 \times 10^{-8} + 6.48 \times 10^{-4} \times 16.4^2 \times 10^{-6}$ $= 0.20 \times 10^{-6}$ (kg·m²)</p> <p>$r_2 = 23.5$(mm)</p> <p>$m_2 = 4 \times 5 \times 6 \times 2.7 \times 10^{-6}$ $= 3.24 \times 10^{-4}$ (kg)</p> <p>$I_{z2} = \{3.24 \times 10^{-4} \times (4^2 + 5^2) / 12\} \times 10^{-6}$ $= 1.11 \times 10^{-9}$ (kg·m²)</p> <p>$I_B = 1.11 \times 10^{-9} + 3.24 \times 10^{-4} \times 23.5^2 \times 10^{-6}$ $= 0.18 \times 10^{-6}$ (kg·m²)</p> <p>$I = 0.20 \times 10^{-6} + 0.18 \times 10^{-6}$ $= 0.38 \times 10^{-6}$ (kg·m²)</p>						
<p>3. Confirm from the table that the inertial moment of one attachment is within the allowable range.</p>	<p>MHC2-6D/MHCA2-6D</p> <table border="1"> <tr> <td>Finger opening and closing speed</td> <td>Allowable inertial moment of attachment</td> </tr> <tr> <td>Without speed controller</td> <td>0.5×10^{-6} Kg·m²</td> </tr> <tr> <td>With speed controller 3/4 to 1 and 1/2 reverse rotation from fully close state</td> <td>1.5×10^{-6} Kg·m²</td> </tr> </table> <p>Attachment inertial moment > Allowable inertial moment</p>	Finger opening and closing speed	Allowable inertial moment of attachment	Without speed controller	0.5×10^{-6} Kg·m ²	With speed controller 3/4 to 1 and 1/2 reverse rotation from fully close state	1.5×10^{-6} Kg·m ²	<p>Attachment inertial moment 0.38×10^{-6} (kg·m²) < Allowable inertial moment without speed controller 0.5×10^{-6} (kg·m²)</p> <p>Therefore, the attachment can be used without a speed controller.</p>
Finger opening and closing speed	Allowable inertial moment of attachment							
Without speed controller	0.5×10^{-6} Kg·m ²							
With speed controller 3/4 to 1 and 1/2 reverse rotation from fully close state	1.5×10^{-6} Kg·m ²							

Symbol

Symbol	Definition	Unit
Z	Central axis of finger rotation	—

Iz2	Inertial moment around Z2 axis of attachment B part	kg·m ²
IA	Inertial moment around Z axis of attachment A part	kg·m ²
IB	Inertial moment around Z axis of attachment B part	kg·m ²
m1	Weight of attachment A part	kg
m2	Weight of attachment B part	kg
r1	Distance between axes Z and Z1	mm
r2	Distance between axes Z and Z2	mm

Limiting Range of Attachment Inertial Moment _____

MHC2-6D/MHCA2-6D

Finger opening and closing speed	Allowable inertial moment of attachment	Weight (Guide)
Without speed controller ^{Note)}	0.5 x 10 ⁻⁶ kg·m ²	2 g or less
With speed controller 3/4 to 1 and 1/2 reverse rotation from fully close state	1.5 x 10 ⁻⁶ kg·m ²	3.5 g or less

MHC2-6S/MHCA2-6S

Finger opening and closing speed	Allowable inertial moment of attachment	Weight (Guide)
Without speed controller ^{Note)}	0.5 x 10 ⁻⁶ kg·m ²	2 g or less
With speed controller 3/4 to 2 reverse rotation from fully close state	1.5 x 10 ⁻⁶ kg·m ²	3.5 g or less

MHCM2-7S

Finger opening and closing speed	Allowable inertial moment of attachment	Weight (Guide)
Without speed controller ^{Note)}	0.3 x 10 ⁻⁶ kg·m ²	2 g or less
With speed controller 1/2 to 1 3/4 reverse rotation from fully close state	1.0 x 10 ⁻⁶ kg·m ²	3.3 g or less

* Applicable speed controller _____ Air gripper direct connection type AS1211F-M3
 Use a meter-in type.
 Note) In the case of MHCM2-7S, provide a run off space because the speed controller protrudes from the body top surface by 0.6 mm.

Note) Sometimes the workpiece may not be gripped precisely because of excessive speed in finger opening and closing. Therefore, use a meter-in type speed controller to adjust the finger opening and closing speed.

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.

Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to [the IDK series in the Best Pneumatics No.6](#).

Specifications

Fluid		Air
Operating pressure	Double acting	0.15 to 0.6 MPa
	Single acting: Normally open	0.3 to 0.6 MPa
Ambient and fluid temperature		-10 to 60°C
Repeatability		±0.02 mm
Maximum operating frequency		180 c.p.m
Lubrication		Non-lube
Action		Double acting, Single acting (Normally open)
Auto switch (Option) ^{Note)}		Solid state auto switch (3-wire, 2-wire)

Note) Refer to pages 797 to 850 for further information on auto switches.

Model

Auto Switch Installation Examples and Mounting Positions

Various auto switch applications are possible through different combinations of auto switch quantities and detecting positions.

1) Detection when Gripping Exterior of Workpiece

Detection example		1. Confirmation of fingers in reset position	2. Confirmation of workpiece held	3. Confirmation of workpiece released
Position to be detected	Position of fingers fully opened 	Position when gripping workpiece 	Position of fingers fully closed 	
Operation of auto switch	Auto switch turned on when fingers return. (Light ON)	Auto switch turned on when gripping a workpiece. (Light ON)	When a workpiece is not held (Abnormal operation): Auto switch to turn ON (Light ON)	
Detection combinations	One auto switch + One position, any of ①, ② and ③ can be detected.	●	●	●
	Two auto switches + Two positions of ①, ② and ③ can be detected.	A	●	—
		B	—	●
C	●	—	●	
How to determine auto switch installation position	Step 1) Fully open the fingers. 	Step 1) Position fingers for gripping a workpiece. 	Step 1) Fully close the fingers. 	
At no pressure or low pressure, connect the auto switch to a power supply, and follow the directions.	Step 2) Insert the auto switch into the auto switch installation groove in the direction shown in the drawing. 			
	Step 3) Slide the auto switch in the direction of the arrow until the indicator light illuminates.	Step 3) Slide the auto switch in the direction of the arrow until the light illuminates and fasten it at a position 0.3 to 0.5 mm in the direction of the arrow beyond the position where the indicator light illuminates.		
		Position where light turns ON 		
	Step 4) Slide the auto switch further in the direction of the arrow until the indicator light goes out.	Position to be secured 		
	Step 5) Move the auto switch in the opposite direction and fasten it at a position 0.3 to 0.5 mm beyond the position where the indicator light illuminates.	Position where light turns ON  Fitting position 		

Note 1) It is recommended to grip a workpiece when the fingers are in parallel with each other.

Note 2) When holding a workpiece close at the end of open/close stroke of fingers, detecting performance of the combinations listed in the above table may be limited, depending on the hysteresis of an auto switch, etc.

ø7

How to Order

Symbol

Single acting/ Normally open: External grip

Specifications

Fluid	Air
Operating pressure	0.4 to 0.6 MPa
Ambient and fluid temperature	-10 to 60°C
Repeatability	±0.02 mm
Maximum operating frequency	180 c.p.m.
Lubrication	Non-lube
Action	Single acting (Normally open)

Model

Action	Model	Cylinder bore (mm)	Gripping moment ^(Note) (Effective value) N·m	Opening/Closing angle (Both sides)	Weight (g)
Single acting (Normally open)	MHCM2-7S	7	0.017	20° to -7°	9.5

Note) At the pressure of 0.5 MPa

Made to Order
[Click here for details](#)

Symbol	Specifications/Description
-X4	Heat resistance (100°C)
-X5	Fluororubber seal
-X56	Axial piping type
-X63	Fluorine grease
-X79	Grease for food processing machines, Fluorine grease
-X79A	Grease for food processing machines
-X81A	Anti-corrosive treatment of finger

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.

Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to [the IDK series in the Best Pneumatics No.6](#).

MHCM2-7S Series

Construction/MHCM2-7S (Compact type)

Single acting/With fingers open

With fingers closed

Component Parts

No.	Description	Material	Note	Replacement parts order no.
1	Body	Aluminium alloy	Hard anodized	
2	Finger	Stainless steel	Heat treatment	
3	Piston	Stainless steel	Heat treatment	
4	Pusher	Stainless steel		
5	Spring	Piano wire	Zinc chromated	
6	Needle roller	High carbon chromium bearing steel		
7	Piston seal	NBR		MYN-4
